

# **Jirra + Zypher Automating**

## **Live demo for Lassana**

### **Flora web site**

In the field of software quality assurance, various testing tools are utilized by the industry to ensure optimal performance, reliability, and user satisfaction. As part of my exploration and practical application of these tools, I conducted a live demonstration using **Atlassian Jira**, a widely adopted project and issue tracking software used for managing software testing and development workflows.

For the live demo testing, I selected the **Lassana Flora** website, a prominent floral and gifting service provider based in Sri Lanka. The purpose of this demonstration was to simulate real-world issue tracking and test management processes within a functioning e-commerce platform. This allowed for hands-on experience in identifying, logging, and managing software quality issues using Jira, thereby reinforcing its practical value in industry-level software quality assurance activities.

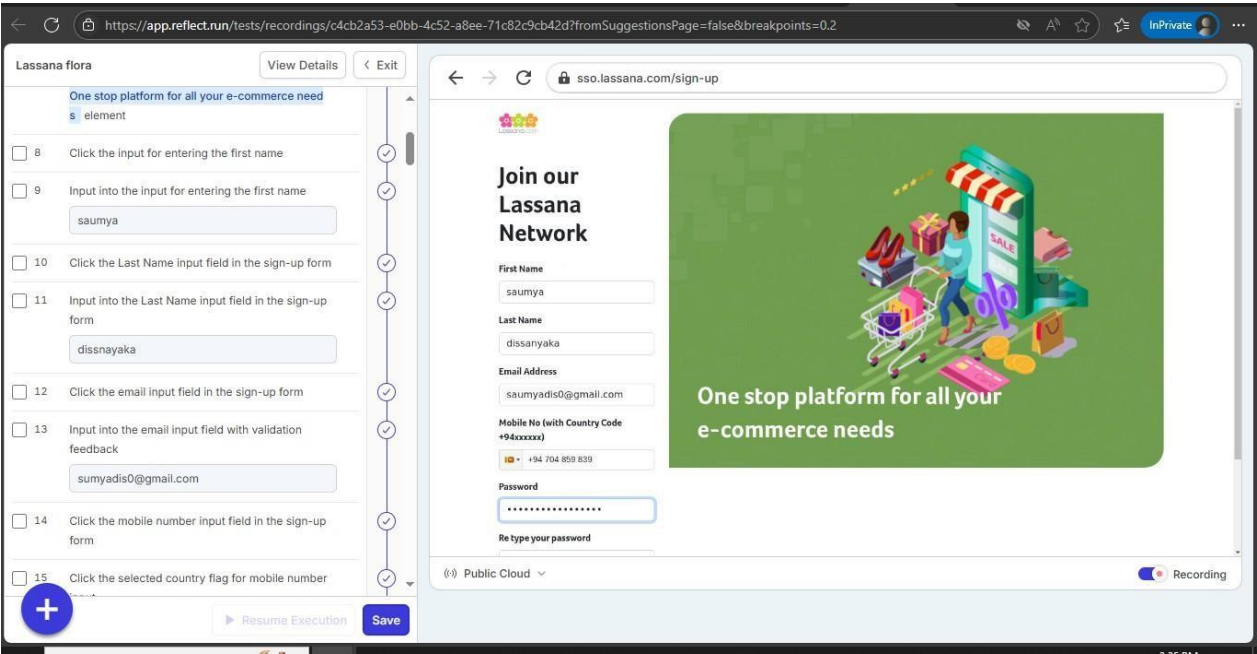

As part of the live demonstration, I focused on testing key user functionalities of the **Lassana Flora** website to evaluate usability, functionality, and system response. The following core features were tested:

- **User Sign Up:** Verified the registration process for new users, including form validation, error handling, and confirmation messages.
- **User Sign In:** Tested the login functionality for existing users, ensuring proper authentication, error messages for invalid credentials, and redirection upon successful login.
- **Order Status:** Assessed the ability for users to view the status of their orders, including real-time updates, tracking information, and interface clarity.
- **View Cart:** Checked the shopping cart feature to ensure that added items were accurately displayed, quantities could be updated, and the cart reflected the correct pricing.

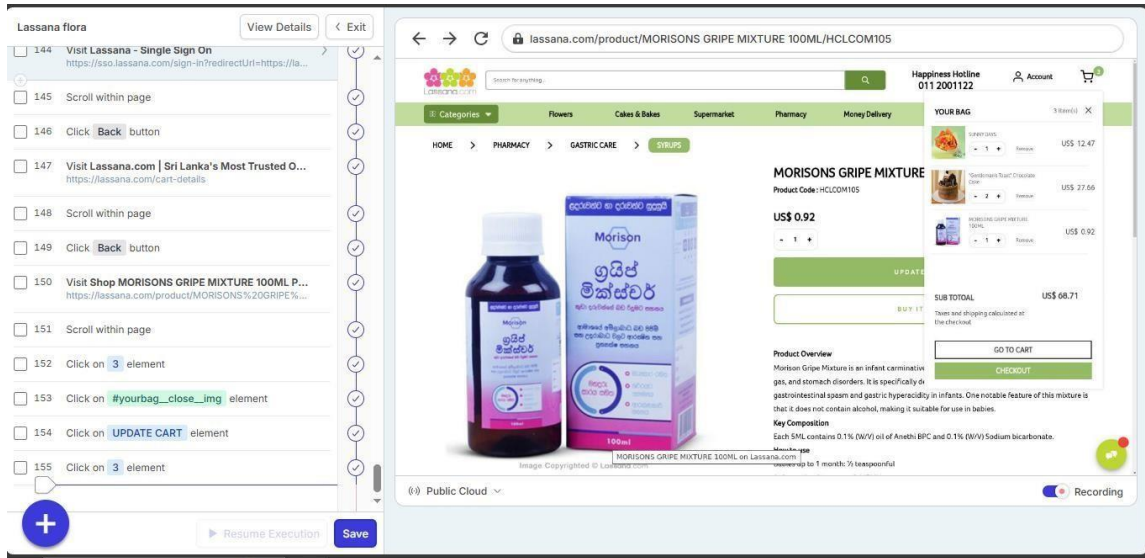

Each of these functionalities was tested using **Atlassian Jira** for issue tracking and reporting, helping to identify any defects or usability concerns encountered during the process.
